гуманным человеком, у него должно быть навыки сострадания, доброты, готовности помочь ученикам, терпимости, благотворительность должна как минимум отражать характеристики школьников, связывающие их с природной и социальной сферами.

Ключевые слова: школа, учитель, ученик, современные технологии, профессиональная деятельность, родители, личность, инициатива, мотивация.

"Education is the greatest of all possessions; if it is of the highest quality, otherwise it is entirely useless," said R. Kipling, one of the famous scientists.

School = teacher + student - the success of a school depends mainly on the success of the teacher and the student. But what is their "success" - what qualities should a successful student have? A student should enjoy learning at school. If something satisfies us, we are happy, if we are happy, we achieve what we want, and by achieving what we want, we achieve success. Success means:

achieving goals, solving problems; luck in business, success at work, arguments, luck, successful action, achieving what is needed. Success is the ability to achieve your goals with enjoyment.

A successful student is the ability to master educational programs, that is, in mastering each subject, he is a creative product of a successful teacher. The ability of teachers to demonstrate their knowledge, skills and abilities - knowing, understanding and explaining what they understand to students are not the same. A high level of knowledge is often the main criterion for the success of school teachers, the ability of students to use the acquired knowledge in life is very important, knowledge that remains only within the walls of the school is useless to anyone. [1].

Teachers need to ensure that students have positive motivation for learning, a positive attitude towards school, and maintain their interest in knowledge. A student who dislikes school and does not want to learn cannot be called successful. Positive relationships between student and teacher - if the student does not respect or fear the teacher, and the teacher does not understand and accept the student, this situation will not lead to any success. Positive relationships with classmates - good physical and mental health; adequate positive self-assessment, the student should feel successful himself. [1;2].

The results of a survey conducted among high school students on the topic "What is student success" show that a confident person with good performance, strengthens trust in teachers, understands teachers, is popular in the classroom, is morally stable, and studies well, responsibly, disciplined, friendly, and learns hard work. To be a successful student, teachers need: students who are able to acquire knowledge and enjoy learning. The teacher must have a clear goal and know how to achieve it. [1;2].

Confident students - they should be able to manage their self-development, be organized, appreciate time, be hardworking, develop their abilities, participate and win in Olympiads and competitions, write essays and theses, develop projects, and master the possibilities of working with the Internet. What does a successful teacher need to educate a successful student, and in order to do this, he must clearly manage students' learning

process and extracurricular activities, know the subject, be tolerant of students' behavior, manage them, not get angry, expect students to do the work he has planned, and prefer warm, humane communication with students. [1;2].

At the same time, it is necessary to pay attention to the student's personality and constantly monitor his individual development. The teacher should be able to use new modern technologies, explain the mysteries of science to students using various methods, and constantly monitor students while constantly asking for homework.

Today, a teacher in a school is a mentor who manages the student's activities, helps him when needed, and leaves him where he can act on his own. A successful teacher is one who has a deep understanding of the subject and psychological-pedagogical knowledge; has high professional qualities; able to help students find their way to self-awareness, to become independent, creative and self-confident people. A successful creative teacher must have certain skills. [1;2].

The results of a survey among high school students of an educational institution on the topic of how a teacher's success is manifested show that students' interest in lessons; high level of personal responsibility; interest and respect for the science of other teachers; self-knowledge and understanding; striving for self-development; demandingness towards oneself and others; originality, resourcefulness, versatility; the embodiment of such qualities as courtesy, this indicates the success of students. A successful teacher is a person with certain socially accepted behaviors, who is the bearer of universal values, a conscious moral position. [1;2].

A teacher should be a humane person, a connecting link between compassion, kindness, compassion, willingness to help, tolerance, benevolence, striving for peace, and interactions with the natural and social spheres. Success is not accidental, but a repeatedly confirmed pattern of positive life experience formed due to a positive way of thinking, comprehensive good education, an optimistic lifestyle, and a person's strong desire to achieve. Certain heights aimed at conquering them and irreversible activity. Currently, creativity and creative activity determine the value of a person, so the formation of a creative person today has not only theoretical but also practical significance. The school is an important element of this process.

The main tasks of a modern school are to reveal the abilities of all participants in the educational process, the most important characteristics of a student, a science teacher, a class teacher, a parent, the modernization and innovative development of our society are initiative, creative thinking and the ability to find non-standard solutions, the ability to choose a career path, willingness to learn and succeed throughout life. Pedagogically, "success" is interpreted as a quality inherent in a person who has achieved success in the process of education and upbringing. This can be the success of a child in school, the success of a teacher in teaching students, and the success of parents in raising children. Thus, the concept of "success" can be considered in a narrow and broad sense. In a broad sense, success means the success in life that a person achieves and experiences throughout his life, striving to realize his creative potential. [1;2].

Date: 29th May-2025

The main result and indicator of school success is the quality of students' knowledge and their upbringing. School teachers are constantly looking for new forms of work. Thus, a new direction of the "successful" program, as a mechanism for managing the development of the education system in the implementation of the idea of improving the quality of students' knowledge and their upbringing, includes 4 directions:

"Successful student"; "Successful teacher"; "Successful class leader"; "Successful parent", To reveal the abilities of students and to maximize the use of the potential of the school of pedagogical culture to realize the creative potential of the teaching staff, to stimulate the cognitive activity and creative activity of students in the classroom and after school, to stimulate the research and creative activity of teachers, systematic self-assessment of the results of their professional activity by the teacher, to increase the activity of parents in the joint activities of family and school.
